

# Flange DN75

Product code: K1A75SF

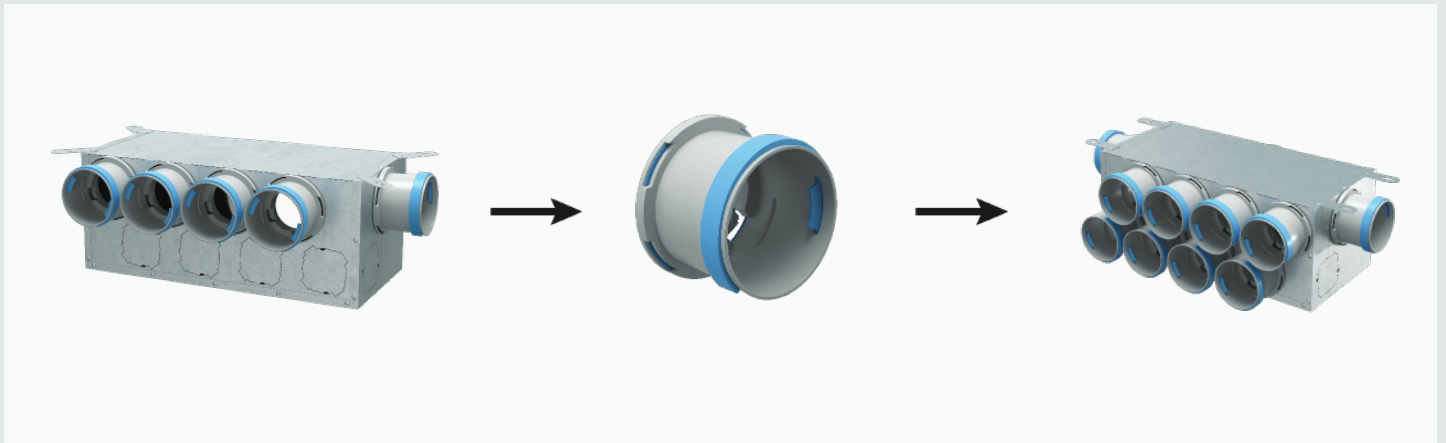

The flanges are used to increase the number of connections for flexible ducts in the air distribution box. The flange can be easily and securely installed in any pre-prepared location in the distribution box.

- **Purpose:** The plastic DN75 flange is designed to connect a universal air distribution box and a flexible 75 mm diameter duct, ensuring a reliable and strong connection point.
- **Material:** The flange is made of high-quality plastic that is resistant to corrosion and moisture, ensuring long-term durability.
- **Compatibility:** The DN75 flange is suitable for use with universal air distribution boxes K1DN16012 and K1DN1259, as well as flexible ducts with a diameter of 75 mm.
- **Double fixing system:** The DN75 flange has a dual fixing system "Click" that provides greater stability and secure attachment. When put on the flange, the plastic fixator provides reliable fastening and prevents the duct from separating or moving during installation. Once put into the collector, the flange remains fixed and does not come loose.
- **Easy installation:** The flange is designed for easy and efficient assembly, ensuring quick and effective installation. The double fixing system not only ensures a secure connection but is also easy to use.
- **Sealing:** To reduce pressure loss and optimize system efficiency, it is recommended to use a rubber gasket on the duct to ensure a tight seal between the duct and the branch.
